## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to an apparatus (plasma processing apparatus), classified in class 156, subclass 345.44.
- II. Claims 14-30, drawn to a method, classified in class 438, subclass 710.
- III. Claims 31-32, drawn to an apparatus (power system), classified in class 315, subclass 111.21.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Groups I, III and Group II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used for applying an amplitude modulated *bias* signal to a wafer support rather than for forming a plasma, or for modulating a gas flow rather than for forming a plasma.

Inventions Group III and Group I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as being implemented for a non-plasma processing apparatus such as for modulating a gas flow into a reactor via a modulated valve. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species 1 - Embodiment 1, page 8, lines 4-12, Figs. 3, 6A-6B, (including a carrier signal being modulated with a frequency modulated signal from a modulated source);

Species 2 - Embodiment 2, page 8, lines 13-19, Figs. 3, 5A-5C, (including a carrier signal being modulated with an amplitude modulated signal from a modulated source);

Species 3 - Embodiment 3, page 8, lines 20-30, Fig. 3, (including a carrier signal being modulated with an amplitude modulated signal and a frequency modulated signal from a modulated source).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are fully generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Patrick R. Jewik on 11/11/02 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
